

Welcome to HTML and CSS Class 2!

Slides at:

<http://gdila.github.io/gdi-core-html-css/class2.html>

Please open your work from last week:

1. Open Sublime
2. Drop last week's folder on Sublime to open it as a project
3. Open index.html in Sublime
4. Open index.html in Chrome
5. Open the Chrome Inspector

HTML and CSS 101

Class 2

Anatomy of a website

Your Content
+ HTML: Structure
+ CSS: Presentation
= Your Website

A website is a way to present your content to the world, using HTML and CSS to present that content & make it look good.

CSS: What is it?

CSS = Cascading Style Sheets

CSS is a "style sheet language" that lets you style the elements on your page.

CSS works in conjunction with HTML, but is not HTML itself.

CSS: What can it do?

All colored text, position, and size

DON'T BE SHY DEVELOP IT

WHO WE ARE

Girl Develop It is a nonprofit organization that exists to provide affordable and judgment-free opportunities for women interested in learning web and software development. Through in-person classes and community support, Girl Develop It helps women of diverse backgrounds achieve their technology goals and build confidence in their careers and their every day lives.

CSS: What does it look like?

```
}-
body {-
  > font: 100% "Gotham", sans-serif;-
  > width: 100%;-
  > padding: 0;-
  > margin: 0;-
}-
header{-
  > clear:both;-
  > width: 100%;-
}-
h3{-
  > font-size: 110%;-
  > font-weight: normal;-
  > letter-spacing: 1px;-
  > margin-bottom: 12px;-
  > margin-top: 10px;-
  > text-transform: uppercase;-
}-
a{-
  > color: #01A9B4;-
  > text-decoration: none;-
  > background-color: transparent;-
}-
a:hover-
{-
  > color: #222;-
}-
#page, #site_bar_content, .header, .footer {-
  max-width: 1200px;-
  min-width: 480px;-
  margin: 0px auto;-
}-
.header{-
  > padding: 10px 15px;-
}-
```

The CSS Rule

The CSS Rule

```
selector {  
  property: value;  
}
```

A block of CSS code is a rule.

The rule starts with a selector.

It has sets of properties and values.

A property-value pair is a declaration.

CSS Syntax

Declarations: Property and value of style you plan use on HTML element.

Declarations end with a semicolon

Declaration groups are surrounded by curly brackets.

```
selector {  
  property: value;  
  property: value;  
  property: value;  
}
```

Selector: Element

```
p{  
  property: value;  
}
```

Selects all paragraph elements.

```
img {  
  property: value;  
}
```

Selects all image elements.

Selector: ID

```
#footer {  
  property: value;  
}
```

Selects all elements with an id of "footer".

```
<p id="footer">Copyright 2011</p>
```

The associated HTML.

Selector: Class

```
.warning {  
  color: red;  
}
```

Selects all elements with a class of "warning".

```
<p class="warning">Run away! </p>
```

The associated HTML.

IDs vs. Classes

ID -- Should only apply to one element on a webpage.
I.E. A webpage only has one footer.
The "#" is how you tell CSS "this is an id."

Class -- Many elements can have the same class. I.E.
There can be many warnings on one webpage.
The "." is how you tell CSS "this is a class name."

Selector: Descendant

```
p em {  
  color: yellow;  
}
```

Selects all em elements that are within a paragraph

```
<p>This is <em>important.</em></p>
```

The associated HTML.

Property Values

Each property can have one or more comma separated values.

```
p{  
  color: white;  
  background-color: red;  
  font-family: Arial, sans-serif;  
}
```

Property: Color

The color property changes the color of the text.

```
p{  
  color: red;  
  color: #ff0000;  
  color: rgb(255, 0, 0);  
}
```

Color name

Hexadecimal value

RGB value

The 17 standard colors are: **aqua**, black, **blue**, **fuchsia**, gray, grey, **green**, **lime**, **maroon**, **navy**, **olive**, **purple**, **red**, **silver**, **teal**, **white**, and **yellow**.

CSS3 has 140 color names:

http://www.w3schools.com/cssref/css_colornames.asp

Property: Background-color

The background-color property changes the color of the background.

```
p{  
  background-color: black;  
  background-color: #000000;  
  background-color: rgb(0,0,0);  
}
```

Property: Font-family

The font-family property defines which font is used.

```
p{  
  font-family: "Times New Roman";  
  font-family: serif;  
  font-family: "Arial", sans-serif;  
}
```

Specific font name

Generic name

Comma-separated list

Property: Font-size

The font-size property specifies the size of the font.

```
p{  
  font-size: 12px;  
  font-size: 1.5em;  
  font-size: 100%;  
}
```

Pixels

"em"

Percentage

Property: Fonts (shorthand)

```
p{  
  font-style: italic;  
  font-weight: bold;  
  font-size: 10px;  
  font-family: sans-serif;  
}
```

OR

```
p{  
  font: italic bold 10px sans-serif;  
}
```

Using CSS with HTML

3 ways

1. Inline
2. Embedded
3. External

Using CSS with HTML: Inline

```
<p style="color: red;">Some text.</p>
```

Uses the HTML attribute style.

Difficult to use in large projects.

Not preferred.

Using CSS with HTML: Embedded

```
<head>
<style type="text/css">
  p {
    color: blue;
    font-size: 12px;
  }
</style>
</head>
```

Inside <head> element.

Uses <style> tag.

Can only be used in one html file

Using CSS with HTML: Linked

```
<head>  
<link rel="stylesheet" type="text/css" href="style.css">  
</head>
```

Shared resource for several pages.

Reduced file size & bandwidth

Easier to maintain in larger projects.

Preferred by developers everywhere!

Let's develop it

- In Sublime, create a new file named `reset.css` in your website folder
- Copy contents of **Eric Meyer's reset stylesheet** into this file and save.
- Add a link to the file in the head of the `index.html`

```
<link rel="stylesheet" type="text/css" href="reset.css">
```

- Look at your page in Chrome, the headings should be the same size

Let's develop it

- In Sublime, create a new file named `style.css` in your website folder
- Add a link to the file in the head of the `index.html`

```
<link rel="stylesheet" type="text/css" href="style.css">
```

- This is where we add our main styles for our site
- Add styles for each heading 1-heading 6 in `style.css`

```
h1 {  
  color: red;  
  font-size: 2em;  
  font-weight: bold;  
}  
  
h2 {  
  color: lime;  
  font-size: 1.8em;  
  font-weight: bold;  
}
```

Cascading

Styles "cascade" down until changed

```
p{
  color:blue;
  font-family: 'Helvetica';
}
.red{
  color:red;
}
#special{
  font-family: Arial;
}
```

```
<p>Paragraph</p>
<p class="green">Paragraph</p>
<p class="red">Paragraph</p>
<p class="red" id="special">Paragraph</p>
```

CSS Properties

Many CSS properties have self-explanatory names:

- background-color
- font-family
- font-size
- font-weight
- font-style
- color
- width
- height

Comprehensive list of all CSS properties

Let's develop it

- Pick at least 3 CSS Properties to add to your style.css and implement
